PROFESSIONAL SUMMARY

Computer Science student at Rutgers University with hands-on experience designing and deploying full-stack applications, including a production AI-powered evaluation platform. Strong focus on backend architecture, REST API design, and database modeling. Seeking a backend or full-stack software engineering role at a tech company where clean, reliable systems matter.

EDUCATION

Rutgers University-Newark

Newark, NJ

B.S. in Computer Science, Minor in Mathematics.

May 2026

Relevant Coursework: Data Structures & Algorithms, Advanced Data Structures, Software Engineering, Operating Systems, Intro to Game Development, AI & Machine Learning

PROJECTS

EvalForge — Backend-Driven Full-Stack Evaluation Platform <https://evalforge.vercel.app>

- Built and deployed a full-stack application using FastAPI, SQLAlchemy, and PostgreSQL to compare model outputs, store experiments, score responses, and visualize evaluation results.
- Designed REST API endpoints and SQLAlchemy ORM models for creating, retrieving, and analyzing evaluation experiments through structured JSON responses.
- Architected backend-protected API calls using environment variables to isolate external service credentials from frontend logic.
- Engineered structured experiment history and dashboard metrics to support repeatable evaluation workflows and quality review of AI-generated outputs.
- Diagnosed and resolved full-stack integration issues spanning API routing, database persistence, CORS configuration, and cloud deployment behavior.

NeuraGraph — AI-Powered Knowledge Graph Builder

<https://neuragraph-git-main-dakaraicodes-projects.vercel.app/dashboard>

- Built and deployed a full-stack AI/NLP application that converts unstructured text into extracted entities, relationship edges, and an interactive knowledge graph.
- Developed FastAPI REST endpoints for text ingestion, graph creation, and React Flow-ready visualization data, with SQLAlchemy persistence for nodes and edges.
- Implemented spaCy-based entity extraction and rule-based relationship mapping to automatically generate graph structures from user-provided text.
- Designed a React/Vite frontend with custom graph nodes, entity type badges, live extraction results, and interactive graph visualization.

SKILLS

Languages: Python, JavaScript, SQL, C, HTML, CSS

Backend: FastAPI, REST APIs, API Integration, Client-Server Architecture, Web Services, JSON

Databases: PostgreSQL, SQLite, SQLAlchemy, Relational Database Design

Cloud/Tools: Git, GitHub, Vercel, Render, Uvicorn, VS Code, Command Line, Environment Variables

Frontend: React, Vite, Tailwind CSS, Recharts
